Advanced Microgrid Solutions Adds Ryan Hanley to Executive Team as Chief Product Officer

SAN FRANCISCO, California – Advanced Microgrid Solutions (AMS), a pioneer in the use of energy storage and analytics, today named Ryan Hanley as Chief Product Officer. In this new role Hanley will head up the product development team at AMS, taking the company's suite of distribution resource services to the next level. Specifically, Hanley will lead a team focused on AMS's product efforts, including overseeing product vision, strategy, design, management, marketing and new product incubation.

"Ryan adds both vision and incredible firepower to the AMS team," CEO Susan Kennedy said. "Ryan's vision, experience and passion for transforming the grid by scaling clean distributed energy is unmatched. Combined with the incredible talent of the AMS team it's a hell of a lot of firepower."

Before joining AMS, Ryan incubated Tesla Energy's and SolarCity's grid services businesses where he led their efforts to aggregate, optimize, and monetize portfolios of distributed energy resources. Ryan led Tesla Energy's Product Economics, Grid Services Product Management, Optimization, Market Participation, Technical Policy and New Program Delivery teams.

"I've been watching AMS for years now, and couldn't be more excited to join such an outstanding team. The energy industry is on the cusp of seeing fleets of distributed energy resources forever change the makeup and operation of the grid, and AMS is perfectly positioned to capitalize on this inflection point. AMS's pedigree of deploying first-of-its-kind portfolios of distributed energy resources combined with the capability of its Armada platform to visualize, control, optimize, and maximize project economics puts us among the short list of companies that can transform the grid and the nature of energy transactions."

###

About Advanced Microgrid Solutions | Advanced Microgrid Solutions (AMS) is pioneering the use of advanced energy storage for energy management and grid services. AMS designs, optimizes, aggregates and manages distributed energy resources and energy storage assets. AMS's building-to-grid™ asset management software Armada™ provides continuously optimized resource management, cost reduction and revenue generation for large-scale energy users and utilities.
